# **TIMELY REPORTING SCHEME**

**TAMILNADU  
2014-15  
FASLI YEAR 1424**

**Principal Secretary/ Commissioner  
Department of Economics and Statistics**

## **PREFACE**

*Timely Reporting Scheme being one of the component of “Improvement of Agricultural Statistics”, is implemented in Tamil Nadu as a centrally sponsored scheme fully funded by Government of India with the aim of estimating the area under nine principal crops and the Land use pattern in the state.*

*This report contains results of the survey conducted during the year 2014-15. It provides details of estimated area under nine principal crops for three season's viz. Kharif, Rabi and summer and also the land use statistics for the year 2014-15. These estimates of area under nine Principal Crops are facilitating timely and quick release of results by the Government of India for each season. The estimates are based on 20 percent sample villages and results compared with the final figures arrived at through Jamabhanti by the end of the fasli year.*

*The co-operation extended by Revenue officials particularly Village Administrative Officers for the timely publication of this report is gratefully acknowledged. The strenuous efforts put forth by the Deputy Directors of Statistics and their field staffs in the districts for the timely completion are commended. The Staff and Officers in the Head Quarters who have involved in tabulation, analysis and report writing deserve appreciation.*

*Suggestions for improvement of this report are welcome.*

*Place : Chennai-6.*

*Sd/- V.IRAIANBU*

*Date : 29.06.2016*

*Principal Secretary/Commissioner.*

## **TIMELY REPORTING SCHEME**

### **1. INTRODUCTION**

#### **1.1 GENESIS OF THE SURVEY**

The Timely Reporting scheme was introduced in Tamil Nadu during the year 1972-73 as a Centrally Sponsored Scheme for the purpose of Timely Assessment of Area sown under nine Principal crops viz., Paddy, Jowar, Bajra, Ragi, Cotton, Groundnut, Sugarcane, Potato and Onion at a particular period of time when it was keenly felt while formulating Agriculture Policies and Programmes both at State and Central level. At the initial stage, this scheme was implemented in all the districts of Tamil Nadu (excluding Chennai, The Nilgiris and Kanyakumari Districts). Subsequently, the scheme was extended to The Nilgiris and Kanyakumari districts excluding Chennai district in the year 1974 -75 and is being continued thereafter every year. Apart from area statistics under 9 principal crops, particulars of area under Land utilization were also collected from the Timely Reporting Scheme villages since 1980-81 in order to send quick estimates of area and Land use statistics to Government of India. Considering the importance of ~~Page + 1~~ the scheme, the Government of Tamil Nadu declared TRS as a programme of National importance in the year 2002-03 vide G.O.M.S.No.97, Dt:16.08.2002.

#### **1.2 FINANCIAL ASSISTANCE & ORGANISATION**

The entire cost of the scheme was met by the Government of India upto the year 1978-79. Subsequently, it was restructured as a shared scheme between state and central government on 50:50 basis. From the year 2003-04 centrally sponsored schemes (i)TRS, (ii) ICS, (iii)CES on F&V have been merged into one umbrella type scheme namely "**Improvement of Agricultural Statistics**" as its components. At state level the execution and administration of the scheme are vested with the Department of Economics and Statistics, of states concerned. In Tamil Nadu state, it is under the control of the Principal Secretary/Commissioner of Economics and Statistics. Now, again from the year 2007-08, Government of India has fully funded for this scheme.

## **2. PLAN OF WORK**

Out of 17289 revenue villages, 3482 villages were selected during the year 2014-15 as 20 percent sampling and the list was communicated well in advance to all Tahsildars and Deputy Directors of Statistics of the districts. The Village Administrative Officers of those selected villages were requested to assemble at the Taluk Office with relevant records on 28<sup>th</sup> October, 28<sup>th</sup> January and 28<sup>th</sup> March for Kharif, Rabi and summer seasons respectively and furnish the relevant data on area sown under 9 important crops during the months of the concerned season.

The filled in schedules thus collected were verified with the related village records and forwarded to the Department of Economics and Statistics within the prescribed cut off dates. The data thus collected were scrutinized, tabulated and analysed. The estimates of area under 9 principal crops were prepared at the Head Quarters and sent to the Economic and Statistical Advisor, Government of India, New Delhi and to the State Government. Land utilization particulars for the year 2014-15 were also collected and estimates were prepared at the Head Quarters and sent to the Economic and Statistical Advisor, Government of India, New Delhi and to the State Government.

### **2.1 PERIOD OF AREA ENUMERATION**

The period covered for each season and the date of completion of area enumeration are furnished in the statement given below:

<b>Season</b>	<b>Months</b>	<b>Duration (No. of months)</b>	<b>Date Of Completion Of Area Enumeration</b>
	July		
1. Kharif	to	4	25 <sup>th</sup> October
	October		
	November		
2. Rabi	to	3	25 <sup>th</sup> January
	January		
	February		
3. Summer	and	2	25 <sup>th</sup> March
	March		

### **3. ESTIMATION PROCEDURE**

Based on the 20 Percent sample data, total area for each of the principal crops for each season for the year 2014-15 were estimated by adopting unbiased sampling method.

#### **UNBIASED ESTIMATES**

The formula adopted for estimating the area and its sampling error is given below.

Let L be the number of blocks (Stratum) in a district. In the  $i^{th}$  stratum ( $i = 1, 2, 3, 4, \dots, L$ ) let there be  $N_i$  villages, out of which  $n_i$  are selected for estimation of area under principal crops.

Let the area under a principal crop in  $j^{th}$  selected village ( $j = 1, 2, \dots, n_i$ ) of the  $i^{th}$  stratum be  $x_{ij}$  under a crop.

Where,

$$P_i = \frac{A_i}{x_i} \sum_{j=1}^{n_i} x_{ij}$$

$P_i$  = Estimated area for the  $i^{th}$  stratum where ( $i = 1, 2, 3, \dots, L$ ) and L is the number of blocks in each district.

$A_i$  = Geographical area in  $i^{th}$  Stratum

$X_i$  = Geographical area of the selected villages in the  $i^{th}$  Stratum

$X_{ij}$  = Area under principal crop in the  $j^{th}$  village of the  $i^{th}$  Stratum.

The estimate of the area under crop for the entire district (d) will be

$$P_d = + \sum_{i=1}^n P_i$$

Where  $n$  = No. of blocks in a district

## **4. RESULTS**

### **4.1 ESTIMATES OF AREA**

The estimates of area relating to Paddy, Jowar, Bajra, Ragi, Cotton, Sugarcane, Groundnut, Potato and Onion were worked out separately for all three seasons. Crop-wise estimates of area for (a) Kharif (b) Kharif and Rabi (c) Kharif, Rabi and summer seasons for the year 2014-15 are presented in Table No. 6.2 of the Annexure.

### **4.2 SAMPLING ERROR**

District-wise / Crop-wise area related to Kharif, Rabi, and Summer and their sampling errors are furnished in Table No-6.3 of the Annexure.

### **4.3 LAND USE STATISTICS**

Data relating to Land Use Statistics under nine-fold classification were collected from the village records under Timely Reporting Scheme. Based on these data, estimates of area under nine-fold classification were projected and the data furnished in Table No.6.4 of the Annexure.

## 5. FINDINGS

### 5.1 COMPARISON OF ESTIMATES WITH SEASON AND CROP REPORT FIGURES

The area estimates under Timely Reporting Scheme in respect of the 9 Principal Crops for the year 2014-15 are compared with the final figures of Season and Crop report 2014-15 in the following Table.

(In' 00 hec.)

CROP	TRS	S&C	%
PADDY	18999 ✓	17949 ✓	5.85 ✓
JOWAR	4556 ✓	4151 ✓	9.76 ✓
BAJRA	552 ✓	577 ✓	-4.33 ✓
RAGI	1375 ✓	1044 ✓	31.70 ✓
COTTON	2479 ✓	1867 ✓	32.78 ✓
GROUNDNUT	3734 ✓	3365 ✓	10.97 ✓
SUGARCANE	3475 ✓	2739 ✓	26.87 ✓
POTATO	32 ✓	47 ✓	-31.91 ✓
ONION	371 ✓	281 ✓	32.03 ✓

The above table indicates that the estimates of area for Nine Principal Crops under Timely Reporting Scheme for the year 2014-15 in TamilNadu have shown a higher side for almost all the crops, excepting Bajra and Potato crops.

A large variation is noticed in the area of Cotton (32.78%), Onion (32.03%) & Ragi (31.7%) when comparing the area of Season and Crop report.

Similarly Sugarcane, Groundnut and Jowar are also showed an increased percentage of variation at **26.87, 10.97 and 9.76** respectively.

## **5.2 DISTRICT WISE ESTIMATES – A CROP WISE COMPARISON WITH SEASON AND CROP REPORT**

### **1. Paddy**

Paddy is the most important cereal crop cultivated in 18.99 lakh hectares of area during 2014-15. The major paddy growing districts are Thanjavur (10.04%), Nagapattinam (9.17%), Thiruvarur (9.08%), and Cuddalore (7.82%), Tirunelveli (7.52%) and Villupuram (7.05%) which account for nearly 50.7% of the total Paddy area of the State. About 62% of the area under the crop was covered in Kharif season alone.

District wise estimates of area as per Timely Reporting Scheme and Season & Crop report are presented in Table 6.5. Compared to Season and Crop report, the estimated area of Paddy for the state under TRS was higher. The State level average variation is 5.85%.

The increased percentage variation is as high as 68.35 in Tirunelveli District and it is low with 2.17% in Dharmapuri District. The decreased percentage variation of -2.60 is high in Thanjavur District and -58.45% low in Coimbatore District.

### **2. Jowar**

Jowar is another cereal crop grown in 4.5 lakh hectares of area in the year 2014-15. The area covered under the crop is more in Namakkal (17.54%) followed by Dindigul (12.34%) and Salem (10.27%) districts. These three districts alone contributed a share of nearly 40.14% to the total area of the crop in the state.

District wise estimates of area as per Timely Reporting Scheme and Season & Crop report are presented in Table 6.5. Compared to Season and Crop report, the variation of area under TRS was 9.76% /

The highest percentage variation is noticed with 119.92 in Tiruvanamalai District and it is low with 4.50% in Ramanathapuram District. The decreased percentage variation -0.6% is high in Thiruchirapalli District and -19.88 % low in Coimbatore District.

### 3. Bajra

Bajra was grown in 0.55 lakh hectares of area during 2014-15 which is comparatively less in the state. The major <sup>Bajra</sup> growing districts are Thoothukudi (26.45%), Villupuram (19.20%), Virudhunagar (7.97%), and Thiruvannamalai (7.78%) which put together contribute 61.4% to the total Bajra area of the State. It is significant to note that about 63.22% of the area under the crop was covered in Kharif season alone.

Compared to Season and Crop report, the estimated area of Bajra for the state under TRS is lower. The State level average variation is -4.33%. The details of district wise variations are provided in table 6.5.

The inflated percentage variation of 126.65 is high in Salem District and 5.15% low in Dindugul District. The deflated percentage variation of -18.70% is high in Theni District and -47.78% low in Thiruvallur Districts.

### 4. Ragi

Ragi was grown in 1.37 lakh hectares in the State during the year under report. It is largely grown in Krishnagiri (45.82) and followed by Dharmapuri (14.55%), Vellore (11.71%) and salem (9.60%) districts in the State. These 4 districts alone contribute 81.67% of cropped area of the ragi crop. About 67.56% of the area under the ragi crop was covered exclusively in Kharif season itself.

Area estimated under the crop by Timely Reporting scheme was higher compared to the Season and Crop report. A comparison with Season and Crop report reveals the state level variation of area under TRS was 31.67%. District wise estimates of area as per Timely Reporting Scheme & Season and Crop report are shown in Table 6.5

The increased percentage variation of 107.04 is found to be high in Erode District and 10.29% low in Sivagangai District. The decreased percentage variation of -6.98 is identified as high in Kancheepuram and -63.06% low in Villupuram districts.

## 5. Cotton

Cotton is an important cash crop largely grown in Perambalur(18.76%), Thiruvannamalai (10.45%), Dharmapuri (8.59%), Salem (7.46%), Tiruchirapalli (6.29%), Virudhunagar(5.97%), Theni(5.45%) and Villupuram (5.04%) districts . In the State, 2.47 lakh hectares of area was covered under the cotton crop during 2014-15.

Compared to Season and Crop report, it is to be noted that the state level variation of area under TRS is 32.78%. District wise estimates of area as per Timely Reporting Scheme and Season & Crop report are presented in Table 6.5.

The increased percentage variation of 372.52 is very much high in Theni District and 10.91 % low in Sivagangai District. The decreased percentage variation of -9.74% is high in Thiruchirapalli District and - 30.23% low in Thiruppur District.

## 6. Groundnut

Groundnut is a prominent oil seed crop grown in about 3.73 lakh hectares in the State. It is of interest to note that about 59.7% of the area under the crop was covered in Kharif season alone. Predominant groundnut growing districts are Thiruvannamalai (20.27%), Vellore (14.25%) and Villupuram (10.79%), which accounted for 58.97% of the State.

Compared to Season and Crop report, the state level variation of area under TRS is 10.96%. District wise estimates of area as per Timely Reporting Scheme and Season & Crop report are detailed in Table 6.5

The increased percentage variation of 295.15 is noticed to be high in Theni District and 0.13% low in Karur District. The decreased percentage variation of -1.76 is high in Krishnagiri District and -22.15% low in Madurai District.

## **7. Sugarcane**

Out of 3.47 lakh hectares of area under the crop, a considerable portion of 24.17% of cropped area is found in the Villupuram district alone. The other important sugarcane growing districts in the State are Cuddalore (17.01%), Erode (10.94%) and Thiruvannamalai (8.55%).

District wise details of estimates are shown in table 6.5. The State average variation of 26.86% is calculated against Season and Crop report.

The increased percentage variation of 142.09 is comparatively high in Krishnagiri District and 1.83% low in Madurai district. The decreased percentage variation of -0.29 is high in Namakkal District and - 97.40% low in Ramanathapuram District.

## **8. Potato**

Potato is cultivated in 3200 hectares of area during 2014-15 which is comparatively minimum in the State. It is largely grown in Dindigul (25%), Krishnagiri (21.87%), Erode (18.75%), Villupuram (9.37%) and Kanyakumari (9.37%) districts in the State. These 5 districts together contribute 84.37% of cropped area of the potato crop.

Area estimated under the crop by Timely Reporting scheme is very much low compared to the Season and Crop report. The state level variation of area under TRS is -31.91%.

About 78.12% of the area under the crop was covered in Kharif season alone. District wise estimates of area as per Timely Reporting Scheme and Season & Crop report are provided in Table 6.5. The increased percentage variation of 59.15 is relatively high in Erode. The decreased percentage variation of -35.19 is high in Krishnagiri and -75.31% is Low in Kanyakumari districts.

## **9. Onion**

Onion was grown in the minimum area of 0.37 lakh hectares during 2014-15 in the state. The major Onion growing districts are Perambalur (18.06%), Thiruchirapalli (10.51%), Theni (9.16%), Erode (7.82%), Dindigul (7.82%), and Tiruppur (7.55%) which account for 60.92% of the total onion area of the State. Area estimated under the crop by Timely Reporting scheme was ~~lower~~<sup>higher</sup> compared to the Season and Crop report. The state level variation of area under TRS is 32%. %.

District wise estimates of area as per Timely Reporting Scheme and Season & Crop report are presented in Table 6.5. The increased percentage variation of 279.75 is very much high in Krishnagiri District and it is slightly low in Perambalur district with 4.28%.

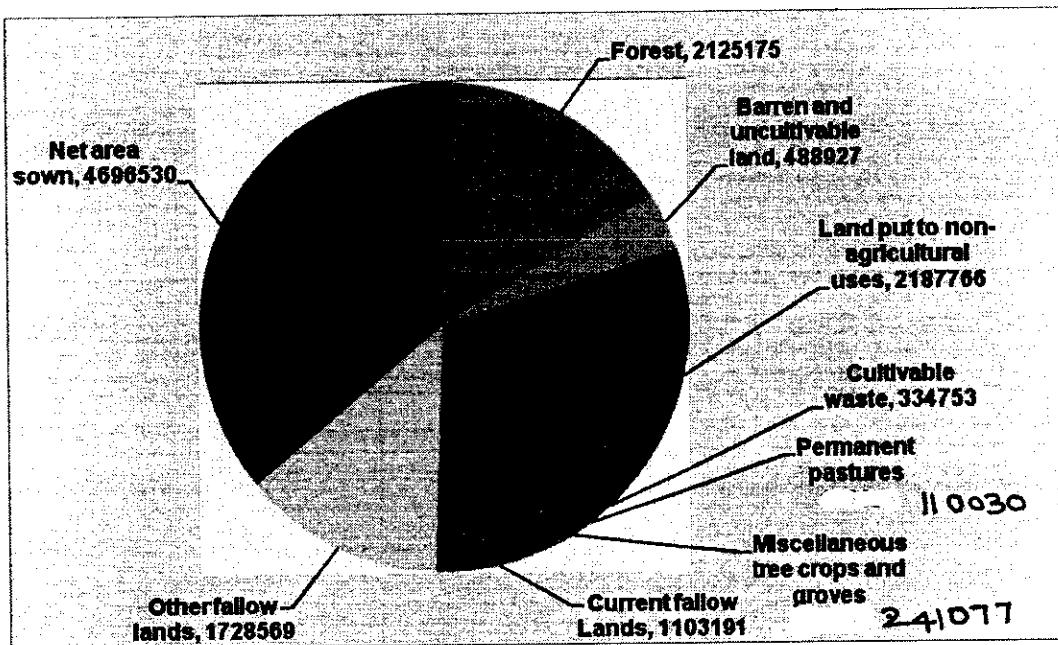

The decreased percentage variation of -9.04 is high in Namakkal District and -78.96% low in Tirunelveli District.

### **5.3 COMPARISON OF NINE FOLD CLASSIFICATION ESTIMATES WITH SEASON AND CROP REPORT FIGURES 2014-15.**

The area estimates under Timely Reporting Scheme for current fallow lands was 110319 as against the area of 1115041 hectares recorded in the season and crop report, registering a substantial ~~decrease~~ of -1.1%. On the other hand, the estimates pertaining to other fallow lands under TRS show the area of 1723569 hectares as presented in the season and crop report, indicating a moderate increase of +0.41% of 0.41 percent. A decrease is noted in the net area sown as -0.04%.

( area in hect )

Category	TRS	Season & Crop Report (2013-14) Expt Comm	% Variation
Forest	2125175 ✓	2125175 ✓	0.0 ✓

<b>Total geographical area</b>	<b>13016018</b>	<b>13016018 ✓</b>	<b>0.0</b>

### Conclusion:

The area estimates framed under Timely Reporting Scheme help us to have the area sown at particular point of time. These estimates are used to get the advanced estimates of food production and from these we can formulate agricultural policies and development programmes at State and Nation levels.

Thus, Timely Reporting Scheme achieved its object by providing advance information on area under nine principal crops with season wise fairly representative estimates during 2014-15.

**TIMELY REPORTING SCHEME

## 6.1 STATUS REPORT

### 6.1 RESPONSE

Out of 17289 villages, 20 percent namely 3482 villages have been planned for the year 2014-15 and Schedules were received fully for Kharif, Rabi and Summer seasons within the cut off date.

### STATEMENT SHOWING THE NUMBER OF VILLAGES SELECTED AND RECEIPT OF FORMS IN EACH SEASON
